

Max Vilchevskiy

Kyiv, Ukraine · Remote

Senior iOS Engineer | AI-Enabled Software Development

vil4max@gmail.com · [Telegram](#) · [LinkedIn](#) · [Portfolio](#) · [GitHub](#)

Summary

Senior iOS Engineer with 13 years in fintech and consumer products, from zero-to-launch apps to multi-year work on Azerbaijan's largest e-commerce marketplace. Turned an in-app subscription feature into a remote Swift Package integrated by Birmarket, Birbank, and m10. Diagnoses production memory leaks, retain cycles, and UI hangs with Instruments, and reviews code across the team. Ships App Store apps built with coding agents — DriveCheckUA and OneCart Family; DriveCheckUA adds on-device Foundation Models with structured validation.

Skills

iOS & Apple Platforms: Swift · Objective-C · UIKit · SwiftUI · Swift Concurrency · Combine · URLSession · REST APIs · WebSockets · Core Data · Keychain Services · StoreKit 2 · watchOS · WatchConnectivity · Realtime Audio Streaming

Architecture & Delivery: Swift Package Manager (SPM) · Modular Architecture · MVVM · Clean Architecture · Dependency Injection · Protocol-Oriented Programming · XCTest · Xcode Instruments · Performance Optimization · CI/CD · App Store Connect

AI Engineering & Development: Apple Foundation Models · Context Engineering · Agentic SDLC · Agentic Workflows · Tool Calling · Structured Outputs · Continuous Evaluation · Deterministic Verification · Human-in-the-Loop Engineering · AI-Assisted Development

Experience

Senior iOS Engineer · GlobalLogic

Jan 2026 - Jun 2026

Apple Watch voice assistant · Hands-free fieldwork

An R&D Apple Watch voice assistant for hands-free fieldwork. Worked with the wider R&D team on the Apple platform client. Led watchOS interaction flows, audio streaming, and the iPhone relay. Shipped a TestFlight demo package with codebase and documentation.

- Built the watchOS voice interface with persistent listening sessions and haptics, mapping structured assistant responses onto known screens and actions rather than executing arbitrary model instructions.
- Implemented the iPhone relay for realtime audio and WebSocket traffic around watchOS runtime limits, plus Work Point maps with compass navigation and a custom emergency flow.
- Evaluated GlobalLogic's VelocityAI SDLC hands-on, authoring scenarios and checking implementations against spec.

WatchKit · Swift Concurrency · WatchConnectivity · WebSockets · AVFoundation · Structured AI Responses

Senior iOS Engineer · PASHA Holding

Apr 2022 - Jan 2026

Birmarket · Marketplace shopping and loyalty

Birmarket (formerly Umico) is a consumer marketplace in the PASHA ecosystem. Embedded in the loyalty engineering team alongside backend and QA specialists. Shipped core loyalty features and spearheaded subscription modularization. Validated the unified subscription package through host integration and TestFlight.

- Extracted Premium Subscription from the Birmarket monolith into a remote Swift Package for three host apps — Birmarket, Birbank, and m10 — breaking cyclic host dependencies on networking and themes.
- Designed the module's integration surface: hosts keep authentication and token refresh; the SDK owns networking and PostHog analytics.
- Diagnosed production memory leaks, retain cycles, and UI hangs with Instruments; onboarded an iOS engineer, coordinated feature assignments, and reviewed code in the loyalty team.

UIKit · SwiftUI · Swift Concurrency · SPM · Multi-host SDK · Unit Testing · Integration Testing · CI/CD · A/B Testing · Feature Flags · Remote Configuration · PostHog

Senior iOS Engineer · Drinkit

Feb 2020 - Feb 2022

Drinkit · Mobile coffee ordering

Drinkit was a digital coffee-shop startup in Dodo Brands, linking mobile ordering with preparation and pickup. Worked in a product team of about 20 across engineering, design, QA and product. Helped establish the mobile team and took ownership of iOS features and releases. Launched the app with the first coffee shop and developed the product for two years.

- Implemented drink customization and pricing, refined UX with the designer, and worked with A/B tests and feature flags.

Senior iOS Engineer • Drinkit

Feb 2020 - Feb 2022

Drinkit • Mobile coffee ordering

- Built looping menu videos and offline caching, and integrated the payment SDK on the host side.
- Covered cart and pricing rules with tests and prepared release builds and manual-testing scenarios.

Swift • UIKit • Combine • SPM • GCD • OperationQueue • MVP • AVFoundation • Offline Caching • Payment SDKs • A/B Testing • Feature Flags • Remote Configuration

iOS Developer • SOLVVE

Jan 2019 - Feb 2020

PLAYHERA • Esports tournament platform

PLAYHERA, an established esports tournament platform. Joined the iOS team at SOLVVE, working in its architecture and review process. Implemented assigned tournament, profile and news features in the RxSwift/UIKit codebase. Maintained production App Store releases for the live esports application.

- Implemented tournament tables, profiles, and settings within the existing UIKit architecture.
- Developed news and feed functionality using RxSwift and the team's code-review process.

Swift • UIKit • RxSwift • Reactive UI • Production Maintenance • Code Review

iOS Developer • Electus

Jul 2018 - Nov 2018

Electus • Consumer cryptocurrency wallet

Electus, a consumer-crypto startup building a wallet for Ethereum and Bitcoin users. Worked as the primary iOS developer inside the startup team. Built the first iOS client from scratch and shaped wallet flows together with the team. Delivered an internal TestFlight MVP with wallet, market data, charts and a news feed.

- Implemented wallet creation, import, balances, asset lists, and market-data charts.
- Integrated secure storage, seed-phrase verification, Ethereum testnet tracking, and Bitcoin data.

Swift • UIKit • Keychain • Touch ID • Ethereum Testnet • Transaction Tracking • Smart Contract Integration

iOS Developer • Early commercial work

Dec 2013 - Jun 2018

Consumer applications and product releases

Mobile software across messaging, news, parking, healthcare, retail and Bluetooth hardware. Independent iOS contributor and delivery-team member. Greenfield apps from scratch plus mature codebase extensions. Delivered multiple commercial App Store releases, plus hardware and taxi prototypes for testing.

- Developed offline patient records with interactive 3D treatment mapping, parking availability, and API-driven consumer apps.
- Integrated and tested Bluetooth trackers with physical prototype devices.

Objective-C • UIKit • Google Maps SDK • Core Location • SceneKit • Core Data • AVFoundation • Swift • CoreBluetooth

Additional projects

FinTech R&D

A fintech prototype for trading physical gold with Ethereum ownership records. Collaborated on iOS alongside backend engineers. Owned the client app across KYC onboarding, portfolio tracking, and buy/sell flows. Delivered a functional beta with Stripe and Apple Pay checkout.

- Integrated KYC verification, live price charts, and gold balance tracking.

OneCart Family • App Store

OneCart Family is a family shopping app with shared iCloud lists. Built independently with coding agents. Led architecture, data synchronization, and release verification. Released on the App Store.

- Implemented offline-first CloudKit sharing, multi-device conflict resolution, and data recovery.

DriveCheckUA • App Store

DriveCheckUA displays regional safety alerts on iPhone and CarPlay. Built independently with coding agents. Architected the client, on-device AI integration, and CarPlay UI. Released on the App Store; evaluated a bounded Swift agent runtime.

- Integrated on-device Foundation Models with structured outputs, deterministic validation, and fallback.
