Senior Software Engineer | iOS | AI-Augmented Engineering

vil4max@gmail.com · [Telegram](#) · [LinkedIn](#) · [Portfolio](#)

Summary

Software engineer with 13 years of experience building iOS products, from early-stage startups to large consumer platforms. Experience spans product launches, sustained product growth, and modernization of established codebases, including e-commerce and fintech. Combines hands-on development with architecture, technical planning, onboarding, and code review. Applies agentic workflows across planning, implementation, testing, and verification, retaining responsibility for technical decisions and delivery quality.

Skills

iOS & Apple Platforms: Swift · Objective-C · UIKit · SwiftUI · Foundation · iOS SDK · Xcode · Swift Concurrency · Combine · Auto Layout · URLSession · REST APIs · WebSockets · Core Data · Keychain Services · StoreKit 2 · watchOS · WatchConnectivity · Realtime Audio Streaming

Architecture & Delivery: Swift Package Manager (SPM) · Modular Architecture · MVVM · Clean Architecture · Dependency Injection · Protocol-Oriented Programming · XCTest · Xcode Instruments · Performance Optimization · CI/CD · App Store Connect

AI Engineering & Development: Apple Foundation Models · Context Engineering · Agentic Workflows · Tool Calling · Structured Outputs · AI-Assisted Development

Experience

Senior iOS Engineer · GlobalLogic

Jan 2026 - Jun 2026

Apple Watch voice assistant · Hands-free fieldwork

An R&D voice assistant for field workers using Apple Watch. Worked within a collaborative R&D team. Responsible for technical design and implementation of key watchOS flows and the iPhone relay. Delivered a TestFlight demo, codebase, and documentation for client evaluation.

- Built watchOS conversation UI and translated structured assistant responses into predictable device actions.
- Implemented the iPhone relay for live audio and WebSocket communication within watchOS runtime limits.
- Evaluated AI-assisted delivery using Jira scenarios, implementation checks, and reviews of fixes and regressions.

WatchKit · Swift Concurrency · WatchConnectivity · WebSockets · AVFoundation · Structured AI Responses

Senior iOS Engineer · PASHA Holding

Apr 2022 - Jan 2026

Birmarket · Marketplace shopping and loyalty

Umico grew into Birmarket, a leading Azerbaijani marketplace in the PASHA ecosystem. Worked in the loyalty team alongside mobile, backend, QA, and product specialists. Took loyalty features from planning to release, then focused on making subscription reusable across three host apps. Subscription functionality became reusable across Birmarket, Birbank, and m10 through one SDK.

- Developed ordering, delivery, and loyalty features while extracting modules from the growing marketplace.
- Built the subscription SDK and its independent PostHog analytics layer; agreed integration contracts with host and backend teams.
- Onboarded an iOS engineer, coordinated feature assignments, and reviewed code within the loyalty team.

UIKit · SwiftUI · Swift Concurrency · SPM · Multi-host SDK · Unit Testing · Integration Testing · CI/CD · A/B Testing · Feature Flags · Remote Configuration · PostHog

Senior iOS Engineer · Drinkit

Feb 2020 - Feb 2022

Drinkit · Mobile coffee ordering

Drinkit began as a digital coffee-shop startup within Dodo Brands, connecting mobile ordering with preparation and pickup. The product team had about 20 people across engineering, design, QA, and product. Organized the mobile team's arrival and took responsibility for iOS features and releases. Launched the app with the first coffee shop and developed the product for two years.

- Implemented drink customization and pricing, refined UX with the designer, and worked with A/B tests and feature flags.
- Built looping menu videos and offline caching, and integrated the payment SDK on the host side.

Senior iOS Engineer • Drinkit

Feb 2020 - Feb 2022

Drinkit • Mobile coffee ordering

- Covered cart and pricing rules with tests and prepared release builds and manual-testing scenarios.

Swift • UIKit • Combine • SPM • GCD • OperationQueue • MVP • AVFoundation • Offline Caching • Payment SDKs • A/B Testing • Feature Flags • Remote Configuration

iOS Developer • SOLVVE

Jan 2019 - Feb 2020

PLAYHERA • Esports tournament platform

PLAYHERA is an international platform for organizing esports tournaments. Worked in the existing iOS team at SOLVVE. Responsible for assigned tournament and user-profile features. Shipped the features in App Store updates to the existing esports application.

- Implemented tournament tables, profiles, and settings within the existing UIKit architecture.
- Developed news and feed functionality using RxSwift and the team's code-review process.

Swift • UIKit • RxSwift • Reactive UI • Production Maintenance • Code Review

iOS Developer • Electus

Jul 2018 - Nov 2018

Electus • Consumer cryptocurrency wallet

Electus was a consumer-crypto startup developing a wallet for Ethereum and Bitcoin users. Primary iOS developer in the startup team. Responsible for the first iOS client and collaborative design of wallet flows. Delivered an internal TestFlight MVP with wallet functionality, market information, charts, and a news feed.

- Implemented wallet creation, import, balances, asset lists, and market-data charts.
- Integrated secure storage, seed-phrase verification, Ethereum testnet tracking, and Bitcoin data.

Swift • UIKit • Keychain • Touch ID • Ethereum Testnet • Transaction Tracking • Smart Contract Integration

iOS Developer • Early commercial work

Dec 2013 - Jun 2018

Consumer applications and client projects

Client projects covered messaging, news, parking, healthcare, retail, and Bluetooth devices. Worked independently and in client delivery teams. Built complete iOS apps and extended existing products. Released client apps and updates; delivered hardware and taxi prototypes for testing.

- Developed offline patient records with interactive 3D treatment mapping, parking availability, and API-driven consumer apps.
- Integrated and tested Bluetooth trackers with physical prototype devices.

Objective-C • UIKit • Google Maps SDK • Core Location • SceneKit • Core Data • AVFoundation • Swift • CoreBluetooth

Additional projects

FinTech R&D

A fintech R&D app for buying and selling physical gold, with ownership recorded on Ethereum. My work covered iOS, alongside backend engineers. Responsible for the customer-facing application. Delivered a client beta and handed over the project.

- Integrated KYC, gold balances, price charts, Stripe and Apple Pay; backend services handled Ethereum ownership records.

OneCart Family • App Store

OneCart Family is a family shopping app with a shared iCloud list and purchase history. Independent development with coding agents. Responsible for product, implementation, and release quality. Released on the App Store.

- Implemented iCloud sharing with offline updates and tested synchronization and recovery.

DriveCheckUA • App Store

DriveCheckUA helps drivers check regional safety alerts on iPhone and CarPlay. Independent development with coding agents. Responsible for app architecture, AI integration, and verification. Released on the App Store; separately evaluated a Swift agent/tool runtime.

- Integrated Apple's on-device language model for short alert summaries, with automated checks and a fallback.
